Subject: Closure - Department of Environment and Natural Resources Case # 2018.048
Process water spill at POET Biorefining in Loomis, SD

Dear Mr. Nedved:

The Department of Environment and Natural Resources (DENR) has conducted a review of the information that has been provided concerning this case. Based upon that information the DENR Ground Water Quality Program has determined that its case file for #2018.048 can be closed.

According to the information provided to date: approximately 500 gallons of process water was released on March 29, 2018, due to a ruptured line. The process water was spilled on the cement and in the nearby ditch; the solids were scooped up; the water was pumped up from the ditch; and all of the contaminated materials were placed back into the process. The DENR Ground Water Quality Program does not intend to require additional assessment or cleanup actions in response to this event.

The reported activities initiated in response to this event are consistent with the expectations of our program. Please be aware that if environmental problems arise additional assessment and remediation might be necessary. Should you have any questions concerning this letter please contact Kelsey Newling of my staff at 605.773.3296. Thank you for protecting South Dakota's water resources.

Sincerely,

Kim McIntosh
Environmental Manager
