

26 OCT 2019

At 1600, Davison Co EM Jeff Bathke contacted the Duty Officer to report an incident involving radioactive materials. SPN Engineering was conducting soil compaction testing and their densometer broke. SPN was able to get a Geiger meter from a nearby hospital to test the amount of radiation coming from the machine and determined that it was below the safe level for transportation. No radioactive materials leaked onto surrounding soil, and all radiation was contained to the machine and case. Jacob Sonne from SPN called in the incident to Emergency Management. The Duty Officer contacted Terry Florentz to report the incident. Mr. Florentz requested an e-mail and indicated he would follow up with SPN. No further contact.
